# Upshop partners with ReposiTrak

Upshop, the technology leader in store operations for food retail, and ReposiTrak, the world's largest food traceability network announce a global partnership to integrate the two powerful technology platforms, to bring simple, smarter and seamless food traceability to the store-level.

Partnership Benefits

Modernize Receiving

Your backdoor infrastructure deserves better! Upgrade your tech stack with Upshop's modern, cloud-native receiving solution that can accept EDI, CSV imports and PDF Invoices at the backdoor. Flag missing lot codes right at the backdoor.

Bi-Directional Data Sync

Capture item lot codes using EDI, PDFs or CSV and fill in any missing fields on data records using API Integrations with ReposiTrak. Bi-directional data sync between Upshop and ReposiTrak ensures data records have no missing fields.

Be FSMA 204 Ready

Tackle FSMA 204 with confidence with 360 degree visibility that allows stores to identify, capture and share KDEs (Key Data Elements) and CTEs (Critical Tracking Events) within in-store and commissary transformation processes.

Quick Error Resolution

Together with ReposiTrak, we've identified and can detect over 100 different types of errors when it comes to data records and have the workflows in place to resolve them.

No Compromise Traceability

Upshop's Source to Store traceability ensures your data flows remain intact regardless of operational workflows, through native integration with ReposiTrak, the industry's largest supplier network.
